                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 repeat_region
                                                                                                                                                                                                                               MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D.
McPherson, Department of Genetics, Washington University, St. Louis
MO. For additional information about the map position of this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P. Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P. J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pleter de Jong and coworkers at the Roswell Park Cancer Institute (http://bacpac.med.buffalo.edu)
Submitted (10-SEP-2001) Genome Sequencing Center, Washington University School of Medicine, 4444 Forest Park Parkway, St. Louis, MO 63108, USA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence was finished as follows unless otherwise noted: chall regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Data from AC013556 was used to finish the clone, AC093805.
Polymorphisms have been identified between AC013556 and AC093805.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NEIGHBORING SEQUENCE INFORMATION:
Actual start of this clone is at base position 1 of RP11-32609;
actual end is at base position 165538 of RP11-32609.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence of AC012532 has been incorporated into AC093805.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                23867
                                                                                                                                                                                                                                                                                                                                                                   NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 70 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the flnished sequence as soon as it is available and the accession number will be preserved.

Runs of N are used to separate the reads * and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for * identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. * However, it should not be assumed that this clone * will be sequenced to completion. In the event that the record is updated, the accession number will * be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Contact: sequence_submissions@genome.wi.mit.edu

proliferation for use in treatment and diagnosis of cancer including sarcomas of high malignancy \,
```

This sequence represents the DNA encoding an endoplasmic reticulum protein (WAR-1). The invention includes rat and human WAR-1 sequences, expression vectors containing the DNA, cells transformed with the expression vector, antibodies against WAR-1, and probes and primers which hybridise to the DNA encoding WAR-1. The WAR-1 protein inhibits the proliferation of cancer cells, and is used in the treatment and diagnosis of cancers including highly malignant sarcomas. ö ctattgttgttgttataattaatgatctgaagaataaccagagctctataggtttatcatgat 120 300 Gaps tatagggcacgcgtggtcgacggcccgggctggtactgggattttgctgttattattatg 60 gagcagccagggggaggcagctgcggctcgccggtgagtatccgggaagcgccaccatgg 480 ggctccgtaagaagagcaccaagaaccccccgttctcagccaggaattcatcctgcaga 540 9 600 099 099 tggataaaattaacaagagaatgcagttcaccaaagcgaaacaaaacaagtttaacgagt 840 taggggcgcggctcgatttccttccctgcctccgccgtcccctggtgcgcatgctca gaacagcagaagcatccatcgtgtttctcactcttcagcacagtgttgctgtccctgcag DB 21; Length 2288; ö Indels Sequence 2288 BP; 612 A; 467 C; 503 G; 706 T; 0 other; ; 0 Ouery Match 100.0%; Score 2288; Best Local Similarity 100.0%; Pred. polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (1) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in disorders for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human changes of the invention.

Coliagnostic coding sequences of the invention appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1016

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been stolated and nuclocities sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length easily human of the construction of the full length cDNA easily human of the construction of the full length cDNA easily human of the construction of the full length cDNA easily human of the construction of the full length cDNA easily human of the construction of the full length cDNA easily human of the construction of the full length easily human of the construction of the full length cDNA easily human of the construction of the full length easily human of the construction of the full length easily human of the construction of the full length easily human of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction of the construction 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Primers useful for synthesizing full length cDNA clones and their in genetic manipulation -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                413

and the recombination process used to produce the polypeptide. The present invention also discloses the method of applying the polypeptide and polynucleotides in treating immunological disorder, malignant tumour cancer and other diseases. The antagonist resisting the polypeptide and its treatment effect is also disclosed. Diagnosis and determination method based on the discrimination of the mutation in the nucleic acid sequence and the change in the polypeptide expression level, and the application of the polynucleotides encoding the BioTRAM. The present sequence represents the coding sequence of the novel human BioTRAM protein as described in the invention.
   protein (BioTRAM), polynucleotides encoding this polypeptide

The present invention describes a screening method for secretory and membrane proteins consisting of transformation of a cell with separate expression vectors for the sense and antisense RNA of DNA encoding an endoplasmic reticulum membrane protein participating in endoplasmic reticulum transport of proteins. Also described are: (1) secretory and cell membrane proteins identified by the screening method; (2) drug compositions containing these proteins; (3) host cells transformed by the separate expression vectors of the method; and (4) the preparation of secretory and cell membrane proteins by culture of the transformants. The method can be used for the identification and preparation of proteins for use in the treatment and prevention of diseases such as cancer, disorders of the nervous system, immune disorders (including allergies and rheumatism) and skeletal disorders. The present sequence
                                                                                         Transformation of a cell with separate vectors expressing the sense antisense strands of WAR-1 DNA for screening secretory and membrane \,
                                                                                                                                                                                            Example 1; Page 68-71; 79pp; Japanese

The present invention describes a screening method for secretory and membrane proteins consisting of transformation of a cell with separate expression vectors for the sense and antisense RNA of DNA encoding an endoplasmic reticulum membrane protein participating in endoplasmic reticulum membrane proteins. Also described are: (1) secretory and cell membrane proteins identified by the screening method; (2) drug compositions containing these proteins; (3) host cells transformed by the separate expression vectors of the method; and (4) the preparation of secretory and cell membrane proteins by culture of the transformants. The method can be used for the identification and preparation of proteins for use in the treatment and prevention of diseases such as cancer, disorders of the mervous system, immune disorders (including allergies and rheumatism) and skeletal disorders. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

AAC77607 to AAC78448 encode the human cancer associated proteins given in AAB4398 to AAB44239. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antisthmatic; antitherary; immunomodulator; antidiabetic; antisthmatic; antitherary; immunomodulator; antidiabetic; antisthmatic; antitherary; immunomodulator; coagulator; antidiamatory; antipsortatic and antiangiogenic. The correction includes and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Complyuciectides, polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Complyuciectides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune cells, to treat disorders of haematopoletic cells, autoimmune cells, to treat disorders of the presses and organ crejection, modulate haemostatic or thrombolytic activity, modulate celection, modulate haemostatic or thrombolytic activity, modulate capacitis and antagonists may be also be used in drug screens. AAC7849, the pressent and antagonists may be also be used in the exemplification of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the conte

Human secreted protein; hyperproliferative disorder; autoimmune disorder; immune deficiency disorder; blood disorder; inflammatory disorder; infectious disorder; gene therapy; antimicrobial; hepatotropic; immunosuppressive; antirheumatic; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to the isolation of novel cDNA sequences which encode human secreted proteins. The cDNA sequences have been derived from a variety of human tissues. The invention also provides a method for producing proteins from these polynucleotide sequences. The proteins are useful for identifying compounds that modulate their activity and production, and the cell is also useful for identifying compounds that modulate expression of the polynucleotide sequences encoding the secreted proteins. The sequences of the invention are useful for treating diseases such as hyperproliferative disorders (e.g. cancer), immune deficiency disorders (e.g. severe combined immunodeficiency (SCID)), autoimmune disorders (e.g. multiple

```
This sequence represents the DNA encoding an endoplasmic reticulum protein (WAR-1). The invention includes rat and human WAR-1 sequences, expression vectors containing the DNA, cells transformed with the expression vector, antibodies against WAR-1, and probes and primers which hybridise to the DNA encoding WAR-1. The WAR-1 protein inhibits the proliferation of cancer cells, and is used in the treatment and diagnosis of cancers including highly malignant sarcomas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              226
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   305
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           346

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          á
                                                                                                                                                                                                                                                                    5;
                    The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the CDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA assily without any special methods. The present sequence is the nucleotide sequence of the 5'-end of a cDNA provided in the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence was used as the representative sequence from a human clone which was used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Primers useful for synthesizing full length cDNA clones and their
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           353

                                                                                                                                                                                   This invention describes novel nucleic acid sequences (A) that are expressed at high level in normal prostatic tissue. Polypeptides (I) proceed by (A) are used: (a) for identifying agents for treatment of prostatic cancer and (b) for therapy of prostate cancer, optionally where expressed by gene therapy methods. (A) is also used to isolate full-length genes (for gene therapy) and for recombinant production of (I), which can be used to raise specific antibodies. (A) are identified by assembly of ESTS (expressed sequence tags) before these are analyzed for expression pattern (tissue specificity). This approach eliminates many of the false results, as regards tissue specificity, associated with known methods that use single (usually short) ESTS. AAZ33477-Z33540 in partern (a) and a described in the method of the

The present invention describes a screening method for secretory and membrane proteins consisting of transformation of a cell with separate expression vectors for the sense and antisense RNA of DNA encoding an endoplasmic reticulum membrane protein participating in endoplasmic reticulum transport of proteins. Also described are: (1) secretory and cell membrane proteins identified by the screening method; (2) drug compositions containing these proteins; (3) host cells transformed by the separate expression vectors of the method; and (4) the preparation of secretory and cell membrane proteins by culture of the transformants. The method can be used for the identification and preparation of proteins for use in the treatment and prevention of diseases such as cancer, disorders of the nervous system, immune disorders (including allergies and rheumatism) and skeletal disorders. The present
     and
Transformation of a cell with separate vectors expressing the sense antisense strands of WAR-1 DNA for screening secretory and membrane
                                                                                                         Claim 3; Page 65-68; 79pp; Japanese.
                                                       proteins expressed by the cell

cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA asily without any special methods. The present sequence is the nucleotide sequence of the 3'-end of a cDNA provided in the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1918

nucleic acids that encode them, including immunogenic fragments of the proteins. Also included are expression vectors expressing the proteins. Also included are expression vectors expressing the proteins and antipon protein and antipon protein. The proteins and nucleic acids may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate breast tumour protein expression, i.e. breast tumours and breast cancer e.g by gene therapy. The nucleic acids and their complements may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The proteins, nucleic acids and antibodies may be used in assays to defentify modulators (e.g. antagonists) of breast tumour protein contents for detecting the presence of the proteins in expression and activity. The antibodies may also be used to down regulate expression and activity. The antibodies may also be used to down regulate expression and activity. The antibodies may also be used to down regulate expression and activity. The antibodies may also be used to down regulate the prevence of the proteins in samples (e.g. by enzyme linked immunosorbant assay (ELISA)) and in other immuno purification diagnostic techniques. The present sequence is much which is a presst tumour protein and activity and in other immuno purification diagnostic techniques. The present sequence is
